

*"Integration is Simplified,
Customers are Satisfied"*

Worship Facilities and Denominational Schools

Operating a facility efficiently, while keeping the staff and congregation happy and safe is critical. Attendance can hinge on the comfort of the worship facility and classrooms. Parents want assurance that their children are in a safe environment with ample security. Aging equipment eventually must be replaced with more efficient systems. Most congregations have a tendency to grow which requires additional space and utility cost, and stewards are tasked with finding cost effective solutions to these issues.

At Divcon EMS we have developed excellent relationships with many worship facilities and denominational schools throughout the DFW Metroplex. These relationships have allowed us to understand your needs and requirements related to energy and security management. We have developed plans and systems for facilities less than 10,000 sqft to over 200,000 sqft. Divcon EMS can help your organization save money and increase peace of mind by having the ease and ability to:

- Maintain a comfortable environment that promotes the productivity of staff and the satisfaction of the congregation
- Operate an energy efficient building
- Reduce maintenance and downtime cost
- Protect property, occupants and the members' interest
- Accurately allocate and track cost for budgeting
- Conduct renovations and expansions faster, easier and cheaper
- Maximize Return on Investment
- Allow reasonable access to facility for extended hours

Divcon EMS improves efficiency of operations. Our easy-to-use software allows owners and facility managers to monitor and control buildings through WANs, a single-seat workstation or a remote location with internet access. Color-coded floor plans are simple to navigate and instantly show any hot or cold spots. Programs and graphics are customizable; data and reports are easy to understand.

BACnet is not dependant on today's hardware or communication technologies and is able to incorporate newer technology as it evolves. Building owners are not held captive by a proprietary system – they are free to choose the best technology available that meets their specific requirements and budgets.

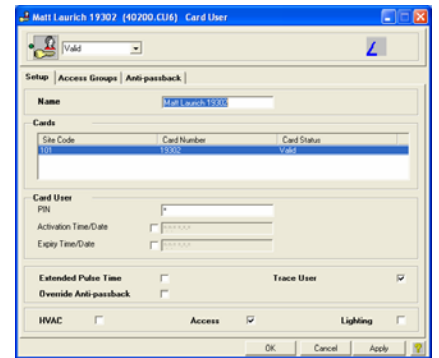

From project installation to ongoing service and maintenance, Divcon EMS is dedicated to delivering the best on time, on budget solution to whatever challenge a facility may face. Our integrated HVAC, lighting, access and CCTV / DVR products are designed to work together; installation is easier and takes less time. Product design and testing ensures reliability and that our products perform as promised.

Benefits to a Worship Facility for Access and CCTV

- Requires only one IP Address and can be Integrated with HVAC and Lighting Control – reduction in Computer hardware, software and firmware by eliminating different security and operational systems
- Reduces Infrastructure cabling by residing on Churches existing Ethernet network
- Eliminates the cost incurred to re-key a facility when necessary – Simply change access code in the main system or deactivate/activate access cards
- Able to change or disable a users access code or card at a moments notice
- Ability to view access report/security transcript and CCTV/DVR image together from the site or through the Web server

Secured Access

- Controlled Access for Main and Service Entrance Doors
- Auto Locking and Unlocking of Public Entrance Doors by Schedule
- Utilization of Keypads for Child Pick-Up so no access cards are issued, but the access code can be changed on a moments notice
- Easy set up of new card users by use of Access Groups and Door Groups
- Monitor individual's Access to your facility and their movements
- Door Monitoring and Alarms of Ajar or Forced Doors

Web and IP Enabled CCTV / DVR

- Security
- Entrance doors
- School Class Rooms
- Money Processing rooms
- Time event indexing of controlled access in conjunction with CCTV Monitoring
- Low traffic common areas
- Audio Visual Equipment Rooms

Divcon EMS is a proud member of Texas Shared Church Services. Texas Shared Church Services is a church group purchasing organization operating in Texas, Oklahoma and New Mexico. Its purpose is to organize and combine the member churches' purchasing volume in order to negotiate lower prices and higher levels of service and quality with local and national vendors.

"Divcon EMS has added a special dimension to our array of Texas Shared Church Services vendors. Only Divcon EMS can offer our member churches a reasonably priced solution to their building automation. Divcon has helped them save on maintenance and energy costs, which for churches, is a significant line item in their budgets."
